The Ashrose Group specialise in using a low pressure sand jetting system that has been used nation-wide for property restoration, including gaining approval for and subsequently working on, many Listed Buildings. The system, in our trained hands, causes minimal damage to an underlying surface and is flexible enough to tackle most property restoration cleaning tasks. However the aggressiveness can be turned up to expose aggregate in concrete for example.

Recently Conservation officers have become very keen on DOFF style superheated steam cleaning of surfaces, and so we have also added Superheated Steam (low pressures less than 100bar) cleaning to our existing hot water pressure washing (250 bar) services and High Pressure (500bar). This provides gentle and non aggressive cleaning and surface preparation to be carried out without needing to clean up the additional waste from abrasives. It will still strip paint, but not as rapidly as some of our other tools!

Subsequent areas that require more cleaning can then be tackled with our other machines as necessary
